

Lab 01: Hello

Overview

In this project students will write a very simply program using Java's input and output methods. The program will prompt the user to enter responses to several questions, displaying the answer each time. The project is designed to give students an opportunity to practice very basic input and output via a simple project.

Specification

When the program starts it should prompt the user for input and print a response (including that input) as follows:

```
Hello. What is your name? James_Brown
It's nice to meet you, James_Brown. How old are you? 42
I see that you are still quite young at only 42.
Where do you live? magicland
Wow! I've always wanted to go to magicland. Thanks for chatting with me. Bye!
```

Submissions

NOTE: Your output must match the example output **exactly**. If it does not, *you will not receive full credit for your submission!*

File: Hello.java
Method: Submit on ZyLabs

Do not submit any other files!

Sample Output

Example #1

Hello. What is your name? **Jimmy_Dean**
It's nice to meet you, Jimmy_Dean. How old are you? **18**
I see that you are still quite young at only 18.
Where do you live? **Oklahoma**
Wow! I've always wanted to go to Oklahoma. Thanks for chatting with me. Bye!

Example #2

Hello. What is your name? **Rick_Sanchez**
It's nice to meet you, Rick_Sanchez. How old are you? **fifty-billion**
I see that you are still quite young at only fifty-billion.
Where do you live? **C187**
Wow! I've always wanted to go to C187. Thanks for chatting with me. Bye!
